

## GENERAL DESCRIPTION

HM2675HV is the monolithic IC designed for a step-down DC/DC converter capable of driving 3A load without an additional transistor. The input voltage range is up to 60V. Its feedback voltage,  $V_{FB}$ , is 200mV. The HM2675HV operates at a switching frequency of 52kHz. The external shutdown function is controlled by a logic level on the ON/OFF pin and then the circuit comes into the standby mode with  $I_{STBY} \sim 50\mu A$  (typ.). The ON/OFF pin may be used for the analog dimming. As the voltage on the ON/OFF pin is increased from 0.07V to 0.67V, the voltage on the FB pin falls from 200mV to 0.

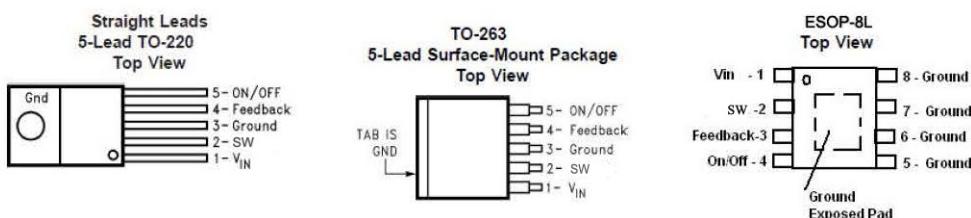

The self-protection features include a cycle-by-cycle current limit and a thermal protection.

The HM2675HV is available in standard TO-220, TO-263 packages and ESOP8 package (for  $I_{LOAD} < 3.0A$ ).
