## LINEAR INTEGRATED CIRCUIT

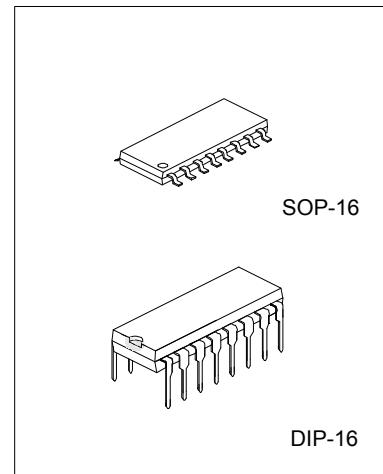

### VOLTAGE MODE PWM CONTROL CIRCUIT

#### DESCRIPTION

The TL494 incorporates all the functions required in the construction of a pulse-width modulation switching circuit. Designed primarily for switching power supply control or DC-DC converters, it offers the systems engineer the flexibility to tailor control circuitry to its own application.

#### FEATURES

- \*Complete PWM power control circuitry
- \*Uncommitted outputs for 200 mA sink or source current
- \*Output control selects single ended or push pull operation
- \*Internal circuitry prohibits double pulses over total range
- \*Easy synchronization

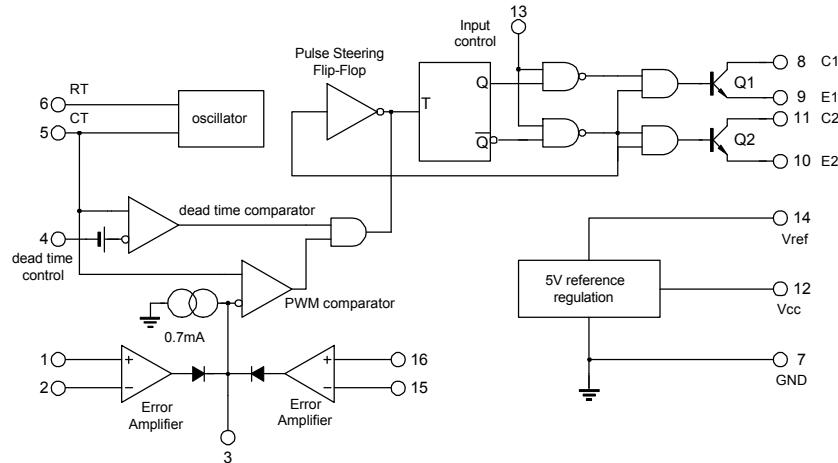

#### ABSOLUTE MAXIMUM RATINGS (Unless otherwise noted all is over operating free air temperature range)
