

## 8-channel Darlington current driver

(Functional equivalent of TD62083AFN, TD62084AFN Toshiba)

The ULN2803AD, ULN2803AN, ULN2804AD, ULN2804AN are 8- channel current driver, consisting of eight Darlington transistors.

Transistors, having high-voltage outputs with high-current load are coupled in common-cathode circuit for commutation of inductive load.

Collector current of one Darlington pair not exceed 500 mA. Darlington pairs can be bridged to increase current.

The ULN2803AD, ULN2803AN, ULN2804AD, ULN2804AN are purposed in different devices: relays, lamps, displays (LED & gas discharge cells), telecommunication lines and logic devices.

### Main features:

- The ULN2803AD, ULN2804AD are realized in 18-pin SO - package MS-013AB, ULN2803AN, ULN2804AN – in 18-pin DIP – package MS-001AC;
- High output sustaining voltage up to 50 V;
- One channel output current up to 500 mA;

Allowable value of electrostatic potential 2000V
